**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Note even with less windy conditions in the afternoon, it will still feel bitterly cold on the tops.

Forecast for Thursday 06 Jan 2022

Weather: Dry, bright, frosty start. Soon becoming cloudy with outbreaks of sleet and snow spreading eastwards later in the morning. Snow will turn to rain or sleet at most levels for a time in afternoon, then clearer, colder weather returning during evening.

Maximum wind: Southerly winds, average speeds increasing 35mph during morning with gusts 50mph over the tops. Winds becoming southwesterly by evening and speeds decreasing a little.

Chance of cloud free mountain/hill tops above 800m: 60% at first becoming 20% later in morning.

Visibility: Good for a time in morning then very poor as sleet and snow sets in with clouds coming well down the hills. Still some pockets of good visibility during the day with clouds lifting at times 600 to 700m.

Temperature: **Valleys:** Minus 3 Celsius at dawn, rising to plus 4 Celsius by early afternoon.
At 800m: Minus 4 Celsius rising to zero Celsius for a time.
Freezing level: 200M rising to 800M for a time then falling to 400m during evening.

Mountain Weather Forecast

Ground Conditions Supplement

Date: Tuesday 4 January 2022. Location: Helvellyn summit at 12:30. Full report: Fresh snow fell overnight and has settled above 200m – 250m. The average depth at 900m is only 2-3cm; however the fine, soft snow is being redistributed on a gusty NW to NNW wind. The main hazard underfoot is the large amount of ice on paths and rocks which this morning was at all levels with a daytime thaw below around 300m. Walkers out on Wednesday should expect and be prepared to encounter even more ice as it refreezes overnight and also additionally on popular routes where the soft snow is compressed by walkers' feet. Microspikes and poles are extremely useful to stay upright. As the fresh snow is blown about, it may well settle on patches of ice causing an additional hazard on paths. Although only covered with a light covering of soft snow exposed routes above the snowline, such as Striding and Swirral Edges, should only be attempted by those confident in winter mountaineering owing to the amount of verglas (thin ice) on some rocks. With the gusty wind, an ice axe is strongly recommended to ensure safe passage and crampons carried in case deeper ice is encountered. With the summit temperature at midday returning to sub zero and the summit windchill (what the temperature feels like) well below at minus 12 degrees, full winter clothing (waterproofs, extra warm layers, hat & gloves), mountain boots and equipment (including torch, map & compass and the ability to use them) are all essential for anyone venturing out onto the high fells. Owing to the amount of biting spindrift being blown about, goggles are also very useful. Those out today dressed in just shorts and trainers were quickly cold whenever they stopped. Extra layers etc are not just for safety, they also allow you to linger at the summit to comfortably soak in the magnificent atmosphere and admire the 360 degree vista. Come properly equipped and enjoy!. Temperature: minus 4.47 C, Maximum wind speed 34.2 mph, Wind chill: minus 12.5 C, Average wind speed: 8.3 mph
